Professional Summary

Backend Java Engineer (Java 8) with experience supporting and extending legacy backend systems using Java, Spring Boot, Hibernate/JPA, and REST APIs.

Proven ability to participate in architectural decisions, evaluate technical trade-offs, and deliver reliable services aligned with functional and non-functional requirements.

Experienced working in agile, cross-functional environments with a strong focus on code quality, maintainability, and ownership of production systems.

Experience

Backend / Full-Stack Java Engineer (Graduation Project), Gerson Andre S.A. – San José, Costa Rica July 2025 – present

- Developed and refactored Java 8 RESTful services using Spring Boot and Hibernate/JPA, improving backend maintainability and long-term reliability by applying layered architecture principles.
- Improved data access performance, measured by optimized query execution and reduced database load, by analyzing existing schemas, applying indexing strategies, and tuning Hibernate mappings.
- Supported and extended backend functionality in a legacy-compatible environment, measured by stable integration with existing modules, by adapting modern design practices to established architectural constraints.
- Delivered consistent REST APIs, measured by reduced frontend integration issues, by implementing DTO mapping, pagination, validation, and global exception handling.
- Supported frontend feature maintenance, measured by successful end-to-end delivery, by collaborating on JavaScript-based UI integrations and maintaining legacy-style frontend flows similar to AngularJS 1.x applications.
- Implemented authentication and authorization, measured by controlled access to protected endpoints, by integrating JWT-based security and role-based access control with Spring Security.
- Increased system reliability, measured by reduced regressions, by implementing automated unit and integration tests using JUnit 5 and Mockito.
- Collaborated in an Agile, Git-based workflow, measured by faster delivery cycles, by using feature branches, pull requests, peer code reviews, and clear technical documentation with OpenAPI/Swagger.

Back Office Agent, UCB – Heredia, Costa Rica Mar 2021 – present

- Improved operational accuracy and data integrity by managing insurance referrals and maintaining structured records across internal systems.
- Enhanced cross-team coordination by collaborating with multiple stakeholders to improve workflow efficiency.
- Supported reporting and basic operational metrics analysis to improve service quality and decision-making.

Education

Universidad Internacional de las Américas, Bachelor's Degree in Computer Science – Costa Rica Nov 2026
Expected Nov 2026

Certifications

- SCRUM Practitioner Certification – CertiProf (2024)
- Conversational English Certification – INA (2023)

Skills

Backend Development: Java 8, Spring Boot, Spring Security, REST APIs, JPA, Hibernate

Architecture & Design: Service-oriented architecture, layered architecture, legacy system support, microservices fundamentals, design patterns

Databases: SQL, MySQL, relational modeling, query optimization, indexing

Cloud & DevOps: AWS (foundational), cloud-native principles, YAML configuration, CI/CD fundamentals

Tools & Practices: Git, Postman, OpenAPI/Swagger, JUnit 5, Mockito, Agile/Scrum

Frontend (Maintenance): AngularJS 1.x, JavaScript, React, TypeScript

Languages

Spanish: Native (C2)

English: Upper-Intermediate (B2)
